

Company Profile

2026

Executive Summary

Snap86 Labs provides specialized web development services focused on performance and scalability. Moving away from standard cloud hosting, we engineer applications using an **edge-computing** model powered by our **Seemless™** engine.

We deliver software solutions that prioritize speed and reliability. By implementing Progressive Web Apps (PWAs) and automated SEO protocols, we ensure applications function efficiently across all devices while maintaining high visibility for search engines. Our continuous integration pipelines ensure that all updates are deployed without interrupting service availability.

Our Identity

Snap represents the user experience we demand —instant, immediate, and frictionless.

86 pays homage to the x86 architecture where modern computing began.

Together, they define our approach: delivering snap-fast performance while paying tribute to the roots of computing. It is a reminder that while we build for the modern Edge, we never forget the x86 foundations where it all began.

Vision

To bridge the gap between web and native performance, creating web applications where premium digital experiences are instantly accessible to any user on any device.

Mission

To eliminate the latency of the legacy cloud.

We replace bloated infrastructure with our proprietary Edge-Native architecture, engineering software that prioritizes absolute speed, zero downtime, and global scalability.

Our Values

Simplicity

We strip away bloat. Less complexity means less latency.

Novelty

We embrace the bleeding edge. We don't follow standards; we set them.

Agility

We move fast. We iterate in hours, not weeks.

Performance

The non-negotiable metric. If it isn't instant, it isn't finished.

Our Services

Edge-Native Websites

We specialize in engineering websites that run on our proprietary **Seemless™** engine, designed for instant global speed and maximum search visibility.

- **Global Speed:** We deliver sub-100ms load times and perfect "100" Lighthouse scores by serving content from the network edge.
- **SEO Dominance:** By delivering edge-cached static HTML, we ensure Google bots index your content instantly, securing higher rankings.

Enterprise Web Platforms

We build mission-critical internal tools and customer-facing platforms engineered for absolute reliability and scale.

- **Zero-Downtime:** Our CI/CD pipelines allow for updates in under two minutes without ever taking your system offline.
- **Serverless Scale:** Architecture that auto-scales with demand, ensuring you only pay for active usage while maintaining enterprise-grade security (DDoS/WAF).

Progressive Web Applications (PWA)

We bridge the gap between web and mobile, delivering app-like experiences directly in the browser without the friction of the App Store.

- **Native Capabilities:** Unlock deep device integration including Biometric Auth (FaceID), Push Notifications, and offline functionality.
- **Frictionless Access:** Users engage instantly via a URL. No downloads, no updates, and a unified codebase for iOS and Android.

AI/IoT Web Integrations

We push boundaries with advanced project-based work in Artificial Intelligence and IoT.

- **Custom Solutions:** Tailored AI/ML models and IoT infrastructure for specific business needs.
- **Smart Integration:** Connecting physical hardware with intelligent edge software.

The Seamless™ Engine

Most agencies depend on heavy legacy frameworks that slow down over time. Snap86 Labs takes a different approach with **Seamless™**, our proprietary **edge-native web engine**. Engineered to leverage the full power of Cloudflare's infrastructure, Seamless bypasses central server bottlenecks entirely, delivering a lean, scalable, and high-performance experience closer to your users than ever before.

Consistent Global Performance

Users experience near-instant load times regardless of their location—whether in London, Colombo, or Sydney. This ensures consistent engagement without the need for complex regional optimization.

Native Features, No Downloads

Provide a mobile app experience directly in the browser. Users can utilize Biometric Auth (FaceID), receive Push Notifications, and access native payment methods without the friction of an App Store download.

Seamless Deployment

Push updates or fixes in minutes, not hours. Changes deploy instantly in the background with zero downtime, ensuring your service is never interrupted by maintenance windows.

Built For Search

We serve optimized static HTML that search engines can crawl and index efficiently. This structure solves common technical SEO hurdles automatically, helping improve your search visibility.

Cost Efficiency

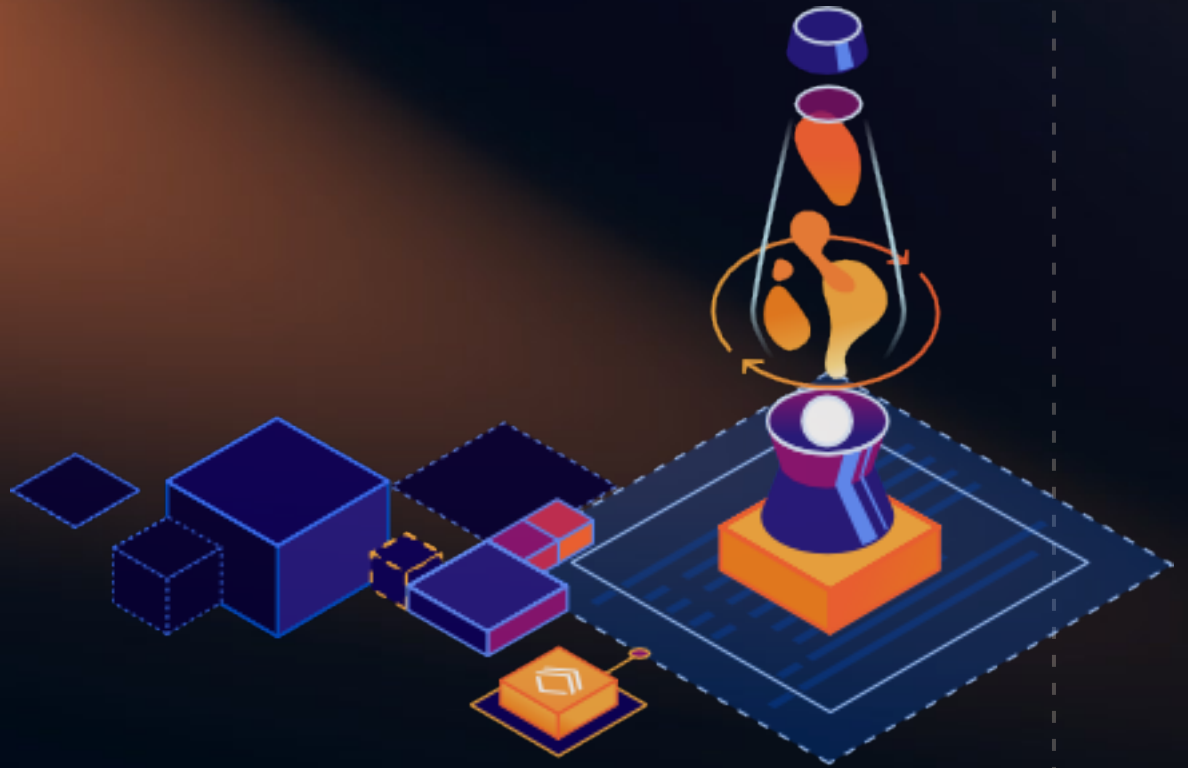

Eliminate overhead for idle server capacity. Our architecture scales automatically based on demand, meaning you only pay for the specific resources your traffic consumes.

Enterprise Security

Your platform is automatically shielded from malicious attacks and downtime. We block DDoS attempts and secure customer data instantly, ensuring your business stays online even during cyber threats.

The Seamless™ Engine

How It Works

Global Edge Network

We utilize Cloudflare's infrastructure across the globe to serve content from the data center nearest to the user. This reduces **latency to under 100ms for 99% of requests globally**, regardless of the user's location.

Automated CI/CD Pipelines

Our continuous integration system pushes code changes in under two minutes. This enables **zero-downtime deployments**, ensuring the application remains fully available to users while updates are applied.

Progressive Web Apps

We build on the PWA, standard to deliver a **unified experience across all devices**. Unlike traditional native apps that require separate development for iOS and Android, our PWAs offer a single, powerful platform that updates instantly with the performance of a native app.

Static HTML Delivery

By combining **Cloudflare Workers** with our **proprietary Incremental Static Regeneration**, we deliver fresh, edge-cached static HTML. This guarantees instant indexing via **Crawler Hints**.

Serverless Infrastructure

We utilize an edge-native architecture powered by **Cloudflare Workers** that scales automatically based on active demand. This eliminates costs associated with idle server time or over-provisioned hardware.

Integrated Edge Defense

We utilize enterprise-grade **DDoS mitigation** and a **Web Application Firewall (WAF)** at the network edge. This filters out malicious traffic and bots before they ever reach your core infrastructure.

Why Snap86?

Long-Term Strategic Alignment

We move beyond transactional development to act as a permanent extension of your leadership team, focusing on technical resilience rather than just short-term hand-offs.

Scalability without Bottlenecks

Our approach eliminates the common architectural hurdles that slow down growing companies, ensuring your technology supports expansion instead of hindering it.

Operational Efficiency

By replacing bloated, traditional cloud setups with a lean, edge-native model, we transform your digital platform from a costly operational burden into a high-speed revenue driver.

Market-Focused Agility

We manage the underlying technical complexities and security, freeing your team to focus entirely on market strategy and business development.

Continuous Evolution

We maintain a secure, zero-downtime digital presence that allows your software to evolve and update as rapidly as your business requirements change.
